7 QUICK STEPS · ABOUT 5 MINUTES OF YOUR TIME

Connecting your *new domain.*

Here's everything you need to do, start to finish, to get your domain pointed at your new website. No tech knowledge needed — just follow the pictures below in order.

> **On your phone?** Works exactly the same — just a bit more scrolling to find each button. Don't worry if things look slightly different on a smaller screen.

1 Buy your domain

We'll send you a link with your domain name already picked out. Click it, create a free account if asked, and pay — your own card, your own account, you own it fully.

2 Message us the exact domain you bought

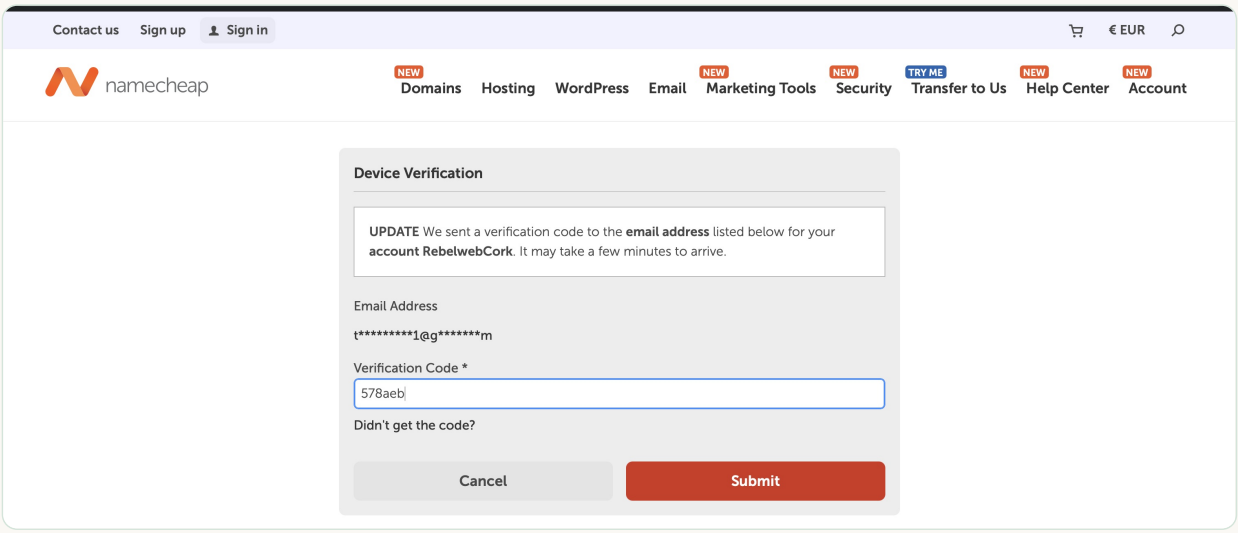

Just a quick text or email — e.g. "*Bought yourdomain.com!*" We need this to set our side up before sending you the next bit.

3 Wait for us to send you two short addresses

We'll get back to you with two web addresses (called "nameservers") — something like `xxxx.ns.cloudflare.com`. Usually same day. You'll need these for the next step.

4 Sign into Namecheap

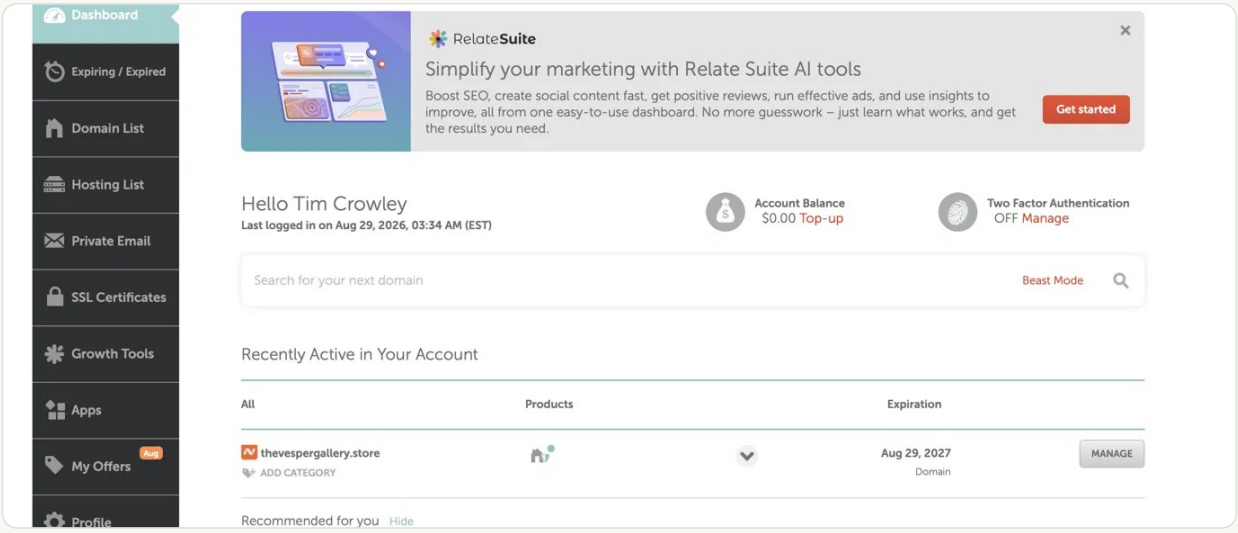

Sign into namecheap.com. You might be asked to enter a short code sent to your email — just check your inbox and pop it in.

If asked, just paste in the code from your email — takes a second

5 Find your domain and click "Manage"

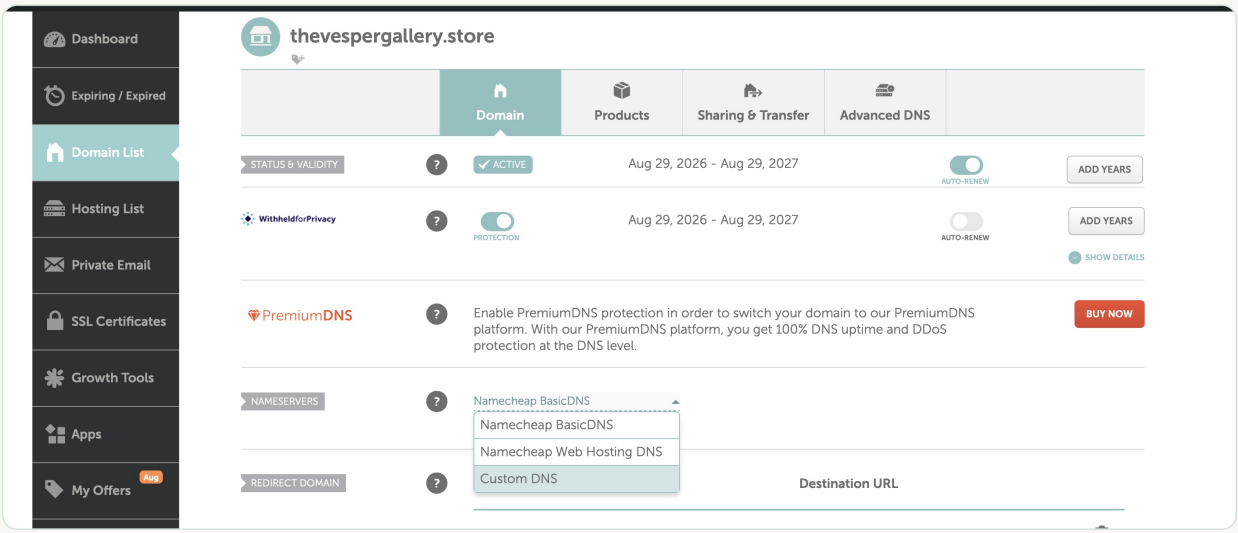

On your dashboard, look under "Recently Active in Your Account" — you'll see your domain listed there. Click the grey "MANAGE" button on the right.

Find your domain here, click "MANAGE" on the right

6 Find "Nameservers" and switch to "Custom DNS"

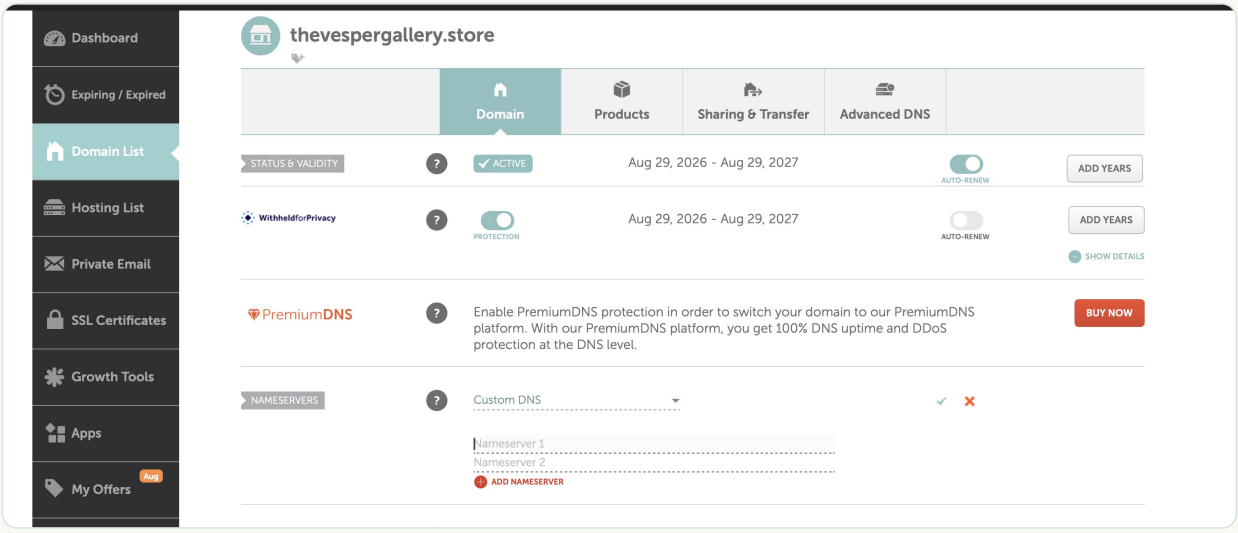

On your domain's page, scroll to the Nameservers section. Click the dropdown (it'll say "Namecheap BasicDNS") and select "Custom DNS" instead.

Click the dropdown, choose "Custom DNS"

7 Paste in the two addresses, save, and you're done

Two empty boxes appear — Nameserver 1 and Nameserver 2. Paste in the two addresses we send you, exactly as sent.

Paste each address in, then click the green checkmark to save

> **Important:** use whatever *we* send you — every domain gets its own unique pair.

Click the green checkmark ✓ next to the dropdown to save. That's genuinely everything on your end.

> **What happens next:** it can take a few hours (sometimes up to a day) to fully switch over — that's completely normal. We'll message you the moment your new site is live on your domain.
